

Thermal-WDM transfer fits at SASHIMI-W's WMAP7cosmology

$z = 0$; $h = 0.7$, $\Omega_m = 0.27$, $\Omega_b = 0.0469$; matched primordial amplitude and DM density

- CLASS
- Vogel (2023), squared
- Viel (2005), squared
- ⋯ CLASS refinement change (2 keV)

Pure two-state thermal relic; massless active neutrinos. Coefficients are fixed to the literature; no refitting.
